PRESS RELEASE Almere, June 7, 2010

Victron Energy B.V. introduces Solar Panels

The use of solar panels has grown rapidly over the years. Unlike fossil fuels, the use of solar energy is environmentally friendly and a sustainable way to generate energy. Therefore, on June 7, 2010, Victron Energy introduces the BlueSolar Panels on the Dutch and international markets.

Maximum performance in sun and shadow

The BlueSolar panels from Victron Energy are of the highest quality: the high-transmission tempered glass provides enhanced stiffness and impact resistance. A sturdy, anodized aluminium frame allows modules to be easily roof-mounted with a variety of standard mounting systems. The BlueSolar panels have an exceptional low-light performance and a high sensitivity to light across the entire solar spectrum. When the panels are shaded, the high-performance bypass diodes minimize the power drop caused by the shade.

The BlueSolar panels from Victron Energy have a 25-year limited warranty on power output and performance.

Electricity at every location

With solar panels, sunlight can be directly converted to electricity. A solar panel can be installed at every location, providing electricity to remote areas or the average home. In The Netherlands the usage of solar panels is being stimulated by a wide range of subsidies.

Unlimited energy with Victron Energy

Victron Energy is a leading provider of power systems for electricity in specific locations. For both grid-connected and off-grid locations Victron Energy has a special set of solar-products: the Solar Switch, Solar Charge Controllers, the Solar Mobile Phone Charger and the BlueSolar Panels. Victron Energy offers a complete power supply, anywhere in the world......
